

ADOB® Calmag

Characteristics

ADOB® Calmag is a speciality fertiliser with high concentrations of nitrogen (N; 13.5%), calcium (CaO; 16.7%) and magnesium (MgO; 6.0%). Owing to a patented production process, **ADOB® Calmag** is characterised by several unique properties. The solubility of the product is 2.3kg/l at 20°C and its rapid and complete dissolution in water makes the nutrients quickly available to plants. The fertiliser is formulated as fully water-soluble, free-flowing flakes without any impurities. As a result of relatively low hygroscopicity, there is no risk of caking. **ADOB® Calmag** is an effective source of calcium, magnesium and nitrate-nitrogen. The product is mainly recommended for foliar application, hydroponics and fertigation.

ADOB® Calmag ensures quick and effective fertilisation of plants with macro- and secondary- nutrients. Nitrogen is the main building block of proteins; it therefore plays a crucial role in plants' vegetative growth and impacts yield productivity. The nitrate (NO_3^-) form of nitrogen in this product ensures its fast uptake by plants, resulting in quick deficiency correction. Calcium is a structural component of cell walls. Its deficiency reduces the mechanical strength of plants and their resistance to pests and diseases, especially at the post-harvest stage. Magnesium is a crucial component of the chlorophyll molecule; it is therefore essential for optimal photosynthesis. It also enhances the catalytic activity of many enzymes by establishing a precise geometry between the enzyme and its substrate.

ADOB® Calmag enables growers to correct calcium and magnesium deficiencies quickly and eliminate the physiological diseases they cause. It contributes to firmness and uniform ripening in fruits and vegetables; it also extends their storage capacity and durability during transportation. The high concentration of nutrients in this fertiliser meets the needs of even the most demanding plants. It is recommended for preventive and corrective fertilisation of all crops.

-  EC fertiliser
-  flakes
-  contains nitrogen, calcium and magnesium
-  low hygroscopicity
-  fast dissolution and complete solubility
-  outstanding quality
-  preventive and corrective effect
-  increased yields and improved yield quality, especially in fruits' post-harvest life

Composition

Composition – ADOB® Calmag

Nutrients	Symbol	Content [% w/w]	Form
Total nitrogen	N	13.5	
– nitrate nitrogen	N- NO_3	13.1	
– ammonium nitrogen	N- NH_4	0.4	
Calcium oxide	CaO	16.7	soluble in water
Magnesium oxide	MgO	6.0	soluble in water

Packaging:
25, 1000 kg
